

Huy Pham

Senior Full Stack Engineer

✉ hu.work.pham@gmail.com

📍 Vietnam

Profile

Full-stack engineer with 9+ years building scalable applications, end-to-end product features, and AI-driven systems. Expert in Python (FastAPI/Django/Flask), modern frontend development using React/Next.js, and deploying production-grade applications across AWS, GCP, and Azure. Experienced integrating advanced LLMs (OpenAI, Gemini, Anthropic) into complex workflows using embeddings, vector databases, and multi-step orchestration. Highly comfortable owning features from architecture → implementation → deployment → monitoring. Strong collaborator with product teams, AI researchers, and cross-functional engineering groups.

Languages

English 

Education

Bachelor's Degree

Ho Chi Minh City University of Technology

09/2011 – 03/2015

Interests

Reading, Football, Painting

Professional Experience

Senior Full Stack Developer

Nexxt Ideas

04/2022 – 08/2025 | Canada

- Served as a full-stack engineer leading feature development across React/Next.js frontends and Python-based microservices.
- Built and deployed AI-assisted data processing tools using OpenAI GPT models, integrating embeddings, summarization, and RAG workflows.
- Designed and maintained REST APIs using FastAPI, enabling high-performance communication between distributed services.
- Architected cloud-agnostic deployments across AWS and GCP using containerized services and serverless functions for cost-efficiency.
- Implemented real-time dashboards, admin tools, and analytic pipelines, improving product insights and operational workflows.
- Took full ownership of multiple end-to-end features from design → development → deployment → monitoring.
- Mentored engineers and established frontend and backend technical standards to improve reliability and velocity.
- Collaborated closely with AI/ML teams to integrate new model capabilities into production applications.

Senior Full Stack Engineer

Devot

09/2018 – 03/2022 | Croatia

- Developed full-stack applications with React + Python, ensuring strict security, performance, and scalability requirements.
- Integrated LLM-based features such as automated documentation, text extraction, and classification using early GPT APIs.
- Built secure backend services using Flask/Django, including authentication, role-based permissions, and asynchronous workflows.
- Managed deployments in Azure and AWS, utilizing serverless components, containerized workloads, and CI/CD pipelines.
- Designed API layers for microservices, optimized database schemas (PostgreSQL/Redis), and improved service reliability.
- Implemented data ingestion tools, embeddings workflows, and vector search proof-of-concepts for internal prototypes.
- Worked with product managers to define technical scope, break down features, and maintain project delivery timelines.
- Collaborated with UI/UX teams to build responsive, modern user experiences with React and custom component libraries.

Software Engineer

Implex

05/2015 – 08/2018 | Poland

- Built modern web applications using React, JavaScript, jQuery, and Python-based backend services.
- Created RESTful APIs, data pipelines, and background tasks using Django and Celery.
- Developed interactive dashboards and responsive UI modules based on designer specifications.
- Prepared migration path to modern React components from legacy UI systems to improve maintainability and speed.
- Deployed applications to AWS EC2, RDS, S3, and managed Git-based workflows across engineering teams.
- Improved system design through modular backend structures, caching strategies, and optimized database queries.

- Implemented logging, error tracking, and observability tools to improve production insight and reduce downtime.

Skills

Frontend

React, Next.js, TypeScript, Tailwind, component-driven architecture, responsive UI, UX collaboration

Backend

FastAPI, Django, Flask, Celery, microservices, async programming, REST APIs, authentication, caching, API gateways

AI & LLM Integration

OpenAI GPT-4/4o, Gemini, Anthropic Claude, embedding pipelines, vector search, RAG systems, AI-driven API workflows

Database

PostgreSQL, MongoDB, Redis, DynamoDB, Pinecone, Chroma, pgvector

Cloud & DevOps

AWS (Lambda, S3, EC2, RDS), Docker, CI/CD (GitHub Actions, Jenkins)

System Design

Distributed Systems, Event-Driven Architectures, Message Queues (Kafka, NATS)

Testing & Quality

Unit & Integration Testing, Go Test, RSpec, GitHub Actions, Jenkins

Webmaster Tools

Google Search Console, Google Analytics, SEO Tools

Software Quality

TDD, integration tests, load testing, fuzzing, secure coding

Soft Skills

Technical leadership, cross-functional collaboration, deep dives, mentoring
