

Huy Pham

Senior Blockchain Engineer

✉ hu.work.pham@gmail.com

📍 Vietnam

Profile

Senior Blockchain Developer with 10+ years of experience in software engineering with delivering production-grade smart contracts, decentralized applications, and scalable blockchain infrastructure. Specialized in Rust (Solana), EVM smart contracts (Solidity), DeFi protocol engineering, on-chain security, and high-performance Web3 systems. Led end-to-end development across multiple international teams (Canada, Europe) and shipped secure, optimized smart contracts used by thousands of users. Known for strong architecture skills, deep protocol knowledge, and exceptional collaboration with product, backend, and security teams.

Languages

English 

Education

Bachelor's Degree

Ho Chi Minh City University of Technology

09/2011 – 03/2015

Interests

Reading, Football, Painting

Professional Experience

Senior Blockchain Developer

Nexxt Ideas

04/2022 – 08/2025 | Canada

- Designed and developed advanced Solana smart contracts in Rust, including lending modules, staking systems, liquidity provisioning, and yield-generating programs.
- Architected and deployed multiple EVM smart contracts (Solidity) for token vesting, governance, on-chain fee mechanics, and multi-sig controlled treasury workflows.
- Led technical direction for several DeFi initiatives, implementing AMMs, auto-compounding vaults, and custom interest-rate models tailored to platform requirements.
- Conducted rigorous smart contract security audits, identifying vulnerabilities such as PDA collision risks, reentrancy, unchecked account constraints, and oracle manipulation.
- Improved Solana program efficiency by reducing compute usage up to 40% through advanced account optimization, instruction batching, and runtime cost analysis.
- Integrated on-chain components with full-stack applications, collaborating with backend and frontend teams using Anchor-client, Web3.js, ethers.js, and Node.js microservices.
- Mentored junior blockchain developers, reviewing code, introducing best practices, and shaping internal guidelines for testing, security, and versioning of on-chain programs.
- Championed CI/CD improvements, including automated Solana program deployment, test simulations, and mainnet-beta rollouts with strong safety guarantees.

Blockchain Engineer

Devot

09/2018 – 03/2022 | Croatia

- Built and deployed EVM smart contracts for DEX integrations, staking pools, yield farms, escrow systems, and token issuance, with a strong focus on security and gas efficiency.
- Developed backend infrastructure to support blockchain operations, integrating wallets, analytics, real-time transaction monitoring, and event indexers across Ethereum and Polygon.
- Worked extensively with Web3 APIs, RPC endpoints, and blockchain indexing tools, achieving highly reliable and scalable on-chain/off-chain data interactions.
- Collaborated with cross-functional teams to implement multi-chain DeFi features, ensuring seamless user experience across compatible EVM networks.
- Conducted unit testing, property-based testing, and transaction simulations to ensure contract reliability under extreme stress conditions.
- Improved gas efficiency by 20–30% across several smart contracts by redesigning data structures, optimizing state transitions, and reducing redundant storage writes.
- Enhanced system security through rigorous audits and implementation of best practices (OpenZeppelin standards, reentrancy guards, signature validation, access control).

- Participated in architectural discussions, ensuring future-proof, modular designs for smart contract systems, API layers, and background services.

Software Engineer

Implex

05/2015 – 08/2018 | Poland

- Developed backend services using Node.js and TypeScript, building high-performance APIs, microservices, and database-driven applications.
- Led contributions to distributed system components, improving scalability, observability, and system throughput across multiple high-traffic platforms.
- Implemented integrations with third-party APIs, authentication systems, and data pipelines that supported enterprise-grade applications.
- Built automation scripts and CI/CD pipelines, reducing deployment time and minimizing system downtime.
- Collaborated closely with cross-functional teams to gather requirements and deliver robust, maintainable software aligned with client expectations.
- Provided early guidance on blockchain adoption, researching smart contract platforms and contributing to foundational experiments with Ethereum tooling.
- Performed code reviews, wrote documentation, and established coding standards for backend development teams.
- Created internal tools and libraries that improved developer productivity and reduced engineering overhead across multiple projects.

Skills

Smart Contracts

Rust (Solana), Anchor, Solidity (EVM), Hardhat, Foundry

DeFi Expertise

staking, AMMs, lending markets, liquidity pools, vaults, yield optimization

Frontend

React, Next.js, TypeScript, TailwindCSS, MUI

Backend Systems

Node.js, TypeScript, PostgreSQL, Redis, Docker, CI/CD

Blockchain Integrations

Web3.js, ethers.js, Solana Web3, wallet integrations

Cloud & Infra

GCP, AWS, Azure, Kubernetes, Docker, Terraform, Helm

Performance & Reliability

Observability, tracing, profiling, Prometheus, Grafana, Sentry

Software Quality

TDD, integration tests, load testing, fuzzing, secure coding

Soft Skills

Technical leadership, cross-functional collaboration, deep dives, mentoring
