

# Pham Van Huy

## Senior Mobile Engineer

✉ hu.work.pham@gmail.com

📍 Hanoi, Vietnam

### Professional Summary

Experienced mobile application developer with a strong track record of delivering production-ready apps using FlutterFlow and modern backend integrations. Skilled in translating product vision and business requirements into scalable, high-performance mobile applications with polished UX. Proven ability to collaborate closely with internal product, design, and stakeholder teams to iterate quickly, resolve technical challenges, and deliver apps that are both visually aligned with brand standards and architected for long-term maintainability.

### Languages

English 

German 

### Education

#### Bachelor's Degree

Ho Chi Minh City University of Technology

09/2011 – 03/2015

### Interests

Reading, Football, Painting

## Work Experience

### Senior Mobile App Developer

Nexxt Ideas

08/2022 – 11/2025

- Built and iterated on mobile applications using **FlutterFlow**, collaborating closely with product owners and designers to refine features and flows.
- Translated product requirements into scalable FlutterFlow components and reusable UI patterns.
- Integrated backend services and third-party APIs to support authentication, data sync, and dynamic content.
- Ensured visual consistency with brand guidelines while maintaining smooth performance across devices.
- Identified and resolved performance bottlenecks related to data loading and UI rendering.
- Provided architectural recommendations to improve long-term maintainability of FlutterFlow projects.
- Worked in fast feedback loops with stakeholders to iterate on UX and feature behavior.

### Full Stack Engineer

Devot

09/2018 – 03/2022

- Delivered multiple mobile and web-based products with a strong focus on usability and scalability.
- Collaborated with design teams to implement pixel-accurate UI and intuitive user flows.
- Integrated mobile applications with backend APIs and cloud services.
- Improved app performance and user engagement through UI optimizations and data handling improvements.
- Supported iterative releases, bug fixing, and feature enhancements based on stakeholder feedback.

### Software Engineer

Implex

03/2015 – 08/2018

- Developed JavaScript-based web interfaces and basic backend endpoints for internal applications.
- Implemented REST API consumption on the frontend to display structured data from services.
- Created responsive layouts and reusable UI components using HTML, CSS, and JavaScript.
- Assisted in building and maintaining Node.js services for simple data processing tasks.
- Fixed bugs, refactored legacy code, and improved maintainability of existing modules.
- Worked closely with senior developers to learn best practices in version control and code quality.

## Skills

---

### Mobile Frameworks

React Native, Flutter, Swift, Kotlin, Objective-C, Java

### AI Integration

TensorFlow Lite, Core ML, Dialogflow, OpenAI APIs

### Backend & APIs

Firebase, REST/GraphQL APIs, Node.js, AWS Amplify

### Databases

PostgreSQL, MongoDB, MySQL, DynamoDB, Firebase

### DevOps / Tools

GitHub Actions, Jenkins, Azure DevOps, Docker, Bitbucket Pipelines

### Cloud & Service

REST APIs, GraphQL, AWS (basic), Real-time Data Streaming

### Testing & QA

Lighthouse, BrowserStack, QA Scripts, Unit Testing

### Performance Optimization

Core Web Vitals, Lazy Loading, SEO Best Practices
