

Huy Pham

Senior Backend Engineer

✉ hu.work.pham@gmail.com

📍 Vietnam

Profile

Senior Backend Engineer with 9+ years of experience designing distributed backend platforms, high-throughput APIs, and cloud-native infrastructures across AWS and bare-metal environments. Strong expertise in TypeScript, Node.js, Golang, Linux, and large-scale system monitoring. Adept at debugging production issues, scaling backend systems, building developer-focused tooling, and shipping high-impact features in async-first, remote environments. Passionate about reliability engineering, Playwright-driven automation, observability, and building products developers love.

Languages

English 

Education

Bachelor's Degree

Ho Chi Minh City University of Technology

09/2011 – 03/2015

Interests

Reading, Football, Painting

Professional Experience

Senior Backend Developer

Nexxt Ideas

04/2022 – 08/2025 | Canada

- Designed and scaled distributed backend services using Node.js, TypeScript, Go, and containerized workloads across AWS and bare-metal nodes.
- Engineered global monitoring, alerting, and automated health-check infrastructure, improving reliability across thousands of downstream services.
- Built internal developer tools that automated test environments, API simulations, and monitoring workflows, significantly improving engineering productivity.
- Worked closely with customers to debug complex runtime issues, reproducing environment-specific edge cases and isolating root causes in distributed systems.
- Introduced observability pipelines using logs, traces, and metrics with OTel-aligned standards, enabling faster insights into system behavior.
- Led major backend scaling efforts—optimizing database queries, improving API throughput, and hardening systems for production reliability.
- Improved system health dashboards, uptime reporting, and status communication systems to ensure transparency for internal and external stakeholders.
- Collaborated async-first across regions, ensuring high output, low-meeting workflows aligned with startup pace and fast shipping culture.

Senior Backend Engineer

Devot

09/2018 – 03/2022 | Croatia

- Developed and maintained backend services in TypeScript, Golang, and Ruby, focusing on API performance and distributed task execution.
- Built internal monitoring tools to track service uptime, latency, and throughput across multiple global environments.
- Conducted deep debugging of API failures, intermittent timeouts, and unusual infrastructure behavior, working directly with customers to identify root issues.
- Integrated complex external APIs, designed reliable retry logic, and ensured data consistency across asynchronous pipelines.
- Implemented and documented high-quality observability tooling including log pipelines, error aggregation, and structured runtime insights.
- Crafted internal developer tooling including automated deployment scripts, load-testing utilities, and diagnostics dashboards.
- Enhanced CI/CD pipelines to support continuous deployment, staging parity, and lightweight production rollouts.

Software Engineer

Implex

05/2015 – 08/2018 | Poland

- Developed backend APIs and distributed services using JavaScript, TypeScript, and Python, focusing on performance and reliability.
- Built reliable background workers, monitoring scripts, and system health-check integrations across Linux environments.
- Assisted in migrating workloads to AWS, improving observability and scalability of legacy backend components.

- Optimized slow endpoints, reduced API latency, and improved throughput via caching, query tuning, and parallelization strategies.
- Designed automated integration testing pipelines leveraging Playwright-like tooling and scripted end-to-end flows.
- Participated in incident response, troubleshooting production failures, and refining post-mortem processes.

Skills

Languages

Go, TypeScript, Python, Node.js, Java

Frameworks

Gin, Fiber, Echo, gRPC, Ruby on Rails, Express.js, Spring Boot

Cloud & DevOps

AWS (Lambda, S3, EC2, RDS), Docker, CI/CD (GitHub Actions, Jenkins)

System Design

Distributed Systems, Event-Driven Architectures, Message Queues (Kafka, NATS)

Testing & Quality

Unit & Integration Testing, Go Test, RSpec, GitHub Actions, Jenkins

Tools & Platforms

Grafana, Prometheus, Nginx, RESTful & GraphQL APIs

Webmaster Tools

Google Search Console, Google Analytics, SEO Tools

Software Quality

TDD, integration tests, load testing, fuzzing, secure coding

Soft Skills

Technical leadership, cross-functional collaboration, deep dives, mentoring
