

Huy Pham

Senior Full Stack Engineer

✉ hu.work.pham@gmail.com

📍 Vietnam

Profile

Senior Software Engineer with 8+ years of experience building highly scalable, distributed backend systems and multi-tenant cloud platforms used globally. Expert in Go, Ruby and Python, with a strong background designing fault-tolerant APIs, event-driven pipelines, and high-performance services powering mission-critical products. Hands-on with Kubernetes, Docker, Terraform, GCP/AWS, and enterprise-grade deployments across cloud and single-tenant environments. Consistently trusted to own architecture, optimize performance, and deliver secure, reliable infrastructure for AI, data-intensive, and developer-focused platforms. Known for shipping fast without compromising quality, driving engineering excellence, and operating in high-talent, research-driven environments.

Languages

English

Education

Bachelor's Degree

Ho Chi Minh City University of Technology
09/2011 – 03/2015

Interests

Reading, Football, Painting

Professional Experience

Senior Full Stack Developer

Nexxt Ideas

04/2022 – 08/2025 | Canada

- Designed and implemented high-performance backend services in Go and Ruby powering multi-tenant B2B systems serving thousands of concurrent users.
- Architected distributed pipelines using Pub/Sub, Redis, Sidekiq and event-driven workflows, improving throughput and system reliability under heavy load.
- Led the build of fault-tolerant API layers with rate limiting, circuit breakers, structured logging, and strong observability metrics.
- Built cloud-native deployments on Kubernetes (GKE) with autoscaling, service mesh, and zero-downtime rollouts.
- Implemented enterprise-ready features including security hardening, isolated tenancy, and compliance-driven logging for regulated clients.
- Improved performance of critical services by 40–60% through profiling, caching strategies, and database query optimization.
- Owned CI/CD pipelines (CircleCI, GitHub Actions), reducing deployment time by half and dramatically cutting incident rates.
- Mentored mid-level engineers, reviewed architecture proposals, and drove engineering maturity across the platform team.

Full Stack Engineer

Devot

09/2018 – 03/2022 | Croatia

- Developed low-latency APIs and service integrations supporting high-volume operations across travel, fintech, and real-time analytics platforms.
- Built production-grade distributed systems on AWS (EKS) and GCP (Cloud Run, Pub/Sub) with strong focus on resilience and uptime.
- Implemented event-driven pipelines handling millions of daily events, with robust monitoring and failure recovery.
- Built Terraform modules to automate cloud resource provisioning and unified infrastructure deployments for multi-tenant environments.
- Led debugging and root-cause analyses for complex system incidents involving concurrency, memory, and distributed-state issues.
- Introduced systematic load testing, improving system capacity and preventing scaling bottlenecks before product launches.
- Enhanced code quality through TDD, CI gating, and service-level contracts documented via OpenAPI.
- Collaborated with research and product teams to support experimental AI-driven features at scale.

Software Engineer

Implex

05/2015 – 08/2018 | Poland

- Developed backend services in Ruby & Go powering multi-service architectures, focusing on reliability, clean design, and high throughput.
- Built resilient communication layers between services using queues, retries, structured events, and intelligent backoff strategies.
- Designed database schemas (PostgreSQL) optimized for concurrency, indexing, and large-scale data ingestion.
- Worked closely with DevOps to containerize workloads and migrate workloads to Kubernetes, standardizing deployments.

- Implemented observability stacks using Prometheus + Grafana, improving system visibility and drastically reducing mean-time-to-recovery.
- Created internal tools that increased developer productivity, including CLI automation, debug utilities, and local cluster environments.
- Ensured test coverage through automated integration tests and fuzz testing for critical endpoints.
- Regularly collaborated with clients to understand technical constraints, propose system designs, and ensure production readiness.

Skills

Languages

Go, Ruby, Python, TypeScript, Bash

Distributed Systems

Microservices, event-driven architecture, pub/sub, streaming, concurrency, resilience patterns

Cloud & Infra

GCP, AWS, Azure, Kubernetes, Docker, Terraform, Helm

Platform Engineering

Multi-tenant systems, SDK tooling, CI/CD, GitHub Actions, GitLab CI, CircleCI

Backend Systems

REST APIs, gRPC, WebSockets, caching (Redis), queues (Pub/Sub, Kafka, SQS)

Performance & Reliability

Observability, tracing, profiling, Prometheus, Grafana, Sentry

Software Quality

TDD, integration tests, load testing, fuzzing, secure coding

Soft Skills

Technical leadership, cross-functional collaboration, deep dives, mentoring
