

# Huy Pham

## Senior Full Stack Engineer

✉ hu.work.pham@gmail.com

📍 Vietnam

### Profile

Principal Full-Stack Engineer with 9+ years building scalable, high-performance platforms and leading architecture across complex front-end and back-end systems. Expert in React, Next.js, Node.js, TypeScript, GraphQL, PostgreSQL, distributed system design, and performance optimization. Deep experience driving end-to-end feature development, defining technical standards, and guiding cross-functional teams in fast-moving environments.

Strong background in CQRS, event-driven systems, API design, containerized deployments, and system observability. Trusted technical leader who excels at solving hard problems, elevating code quality, improving system reliability, and shaping engineering culture. Known for structured thinking, product empathy, and clear communication with both technical and non-technical stakeholders.

### Languages

English

### Education

#### Bachelor's Degree

Ho Chi Minh City University of Technology

09/2011 – 03/2015

### Interests

Reading, Football, Painting

## Professional Experience

### Senior Full Stack Developer

Nexxt Ideas

04/2022 – 08/2025 | Canada

- Acted as principal engineer across multiple product teams, guiding architecture for high-scale web applications and distributed backend systems.
- Built and maintained React + Next.js applications with strong performance, accessibility, and reusable component design.
- Designed backend microservices with Node.js + TypeScript, improving API reliability, request throughput, and developer productivity.
- Implemented GraphQL APIs to streamline data access patterns, reduce overfetching, and improve client-side latency.
- Led design and refactoring of large PostgreSQL schemas, improving data integrity, query performance, and scalability.
- Introduced CQRS-like separation in critical modules to resolve performance bottlenecks and simplify data flows.
- Championed coding standards, design reviews, and architecture decision records (ADRs) across engineering teams.
- Troubleshooted and resolved complex production incidents involving concurrency, race conditions, caching, and data consistency.
- Partnered closely with designers, PMs, and backend engineers to deliver end-to-end features that aligned technical and business goals.

### Senior Full Stack Engineer

Devot

09/2018 – 03/2022 | Croatia

- Built enterprise-grade frontends using React, TypeScript, Redux, and modular architecture suitable for long-term maintainability.
- Developed high-performance backend services in Node.js, creating robust REST/GraphQL APIs used across multiple internal products.
- Optimized PostgreSQL queries, indexing strategies, and transaction management to support thousands of concurrent users.
- Designed event-driven workflows for asynchronous tasks and system integrations, including message queues and webhook processors.
- Led troubleshooting and performance tuning of critical production systems, improving uptime and response times.
- Guided migration from legacy APIs to a modern GraphQL layer, reducing code complexity and improving developer velocity.
- Mentored engineers on TypeScript best practices, architectural patterns, and scalable frontend development workflows.

### Software Engineer

Implex

05/2015 – 08/2018 | Poland

- Developed responsive, performant user interfaces using React and modern JavaScript.
- Built backend services with Node.js and Express, implementing REST APIs, authentication, and data pipelines.
- Implemented Docker workflows and CI pipelines to support continuous delivery and automated testing.
- Collaborated with designers and PMs to translate requirements into polished user experiences.
- Participated in schema design and performance improvements for relational databases.

- Contributed to modernization initiatives replacing monolithic legacy code with modularized, scalable architecture.

## Skills

---

### Frontend

React, Next.js, TypeScript, Tailwind CSS, HTML5/CSS3, component-driven architecture, performance optimization, real-time interfaces.

### Backend

Node.js, TypeScript, Express.js, Nest.js, GraphQL, REST, CQRS, event sourcing, PostgreSQL, caching layers, microservices, distributed systems.

### Database

PostgreSQL, MongoDB, Redis, DynamoDB, Pinecone, Chroma, pgvector

### Cloud & DevOps

AWS (Lambda, S3, EC2, RDS), Docker, CI/CD (GitHub Actions, Jenkins)

### System Design

Distributed Systems, Event-Driven Architectures, Message Queues (Kafka, NATS)

### Testing & Quality

Unit & Integration Testing, Go Test, RSpec, GitHub Actions, Jenkins

### Webmaster Tools

Google Search Console, Google Analytics, SEO Tools

### Software Quality

TDD, integration tests, load testing, fuzzing, secure coding

### Soft Skills

Technical leadership, cross-functional collaboration, deep dives, mentoring
